Claims 1-29 and 38-46 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: the means used for varying, measuring, monitoring regulating or controlling the peak irrigation rate and the average irrigation such that the claimed "rate of irrigation of each said evaporation chamber has a respective average irrigation rate and so varies as repeatedly to reach a respective peak irrigation rate that is a least twice the average irrigation rate. " is achieved, known or measured . Note claims 1 and 38.

(Applicant argues that the claims contain nothing about measuring the rate is that the claim is not directed to an apparatus for measurement. It is instead directed to evaporating and condensing. However, the claim does not just recite "evaporating and condensing". The claims also include an irrigation system . One would not know what constitute the structure that can at least determine the peak irrigation and that it is at least twice the average irrigation rate within the context of the claimed invention).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1764

Claims 1-5, 10-12, 17-20, 24-25 and 38-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over GB '085, Hickman, Shafranovsky et al or Ramshaw et al in view of Won.

The above references are applied for the same combined reasons as set forth at page 2 of the previous Office Action. Won is applied for its teaching in col. 6, lines 3-21 of adjusting the rate of atomization.

Claims 6-9, 13-16, 21-23 and 26-29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sisson et al discloses an irrigation sprinkler system.
